Following up on some of the meeting topics, I would like to clarify a few points of concern regarding the statistical program.
1. Validating the statistical program for accuracy.
2. Making sure certain fields can not be manipulated once the program performs a calculation. Currently, just about any relevant field can be altered after the program performs its calculations.
For example, net weight, standard deviation, and the estimated minimum/maximum net weight range can be altered.
3. Administrative privileges- I think only Kip or IT should have the programs password and ability to alter the program.
